SUMMARY

Aspiring Java Full Stack Developer (B.E. Information Technology, 2027) with hands-on experience building web applications using **Java, Servlets, JSP, Hibernate, MySQL and React**. Built and deployed an AI-powered study assistant using the **Gemini API**. Seeking an entry-level Software Developer role to contribute to impactful projects.

EDUCATION

B.E. Information Technology — PVG COET, Pune **2027**

CGPA: 8.0 / 10 (up to 3rd year)

HSC (Class XII) — PVG's COET, Pune **70%**

SSC (Class X) — Muktangan English School, Pune **87%**

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML, CSS, JavaScript

Frameworks & Technologies: Servlet, JSP, JDBC, JSTL, Hibernate, React, Vite

Databases: MySQL, MongoDB

Tools: Git, GitHub, STS, VS Code, Vercel

PROJECTS

AI-Powered Study Buddy Assistant

GitHub | Live Demo

- Built a dynamic web app with **React and Vite**, integrated with the **Gemini API** for automated content generation.
- Engineered features to generate study notes, interactive quizzes, and step-by-step explanations.
- Deployed the production-ready app on **Vercel** with Git-based version control.

Student Record Management System | JSP, Servlets, JDBC, JSTL, MySQL

- Developed a web application with full **CRUD operations** (create, view, update, delete) to manage student records, backed by a MySQL database.
- Followed **MVC architecture**: JSP and JSTL for views, Servlets as controllers, and JDBC for database access.

Library Management System | JSP, Servlets, JDBC, JSTL, MySQL

- Built a CRUD-based web application to add, search, update, and remove library records with persistent MySQL storage.
- Used JSTL to render dynamic data on JSP pages and structured the code in **MVC layers** for cleaner, maintainable logic; developed in Spring Tool Suite.

RESEARCH

Real-Time Fall Detection | Research Paper (Ongoing)

- Working on a research paper on **real-time fall detection**, focused on identifying falls the moment they occur so that timely alerts can be raised for elderly and at-risk individuals.
- Studying **machine learning and deep learning** approaches that balance detection accuracy with low latency, while reducing false alarms from everyday activities such as sitting, bending, or lying down.
- Reviewing existing sensor-based and vision-based methods, and evaluating performance on metrics such as accuracy, precision, recall, and response time.

TRAINING & CERTIFICATIONS

- **Full Stack Java Development** (Ongoing) — Core Java, Servlets, Hibernate, and modern web application workflows.
- **AI Agents Training** (Ongoing) — Prompt engineering, AI workflows, agent deployment, and multimodal generation.
- **IBM SkillsBuild** — Completed AI & Machine Learning fundamentals modules; cleared all assessments. Certificate
- **German A1** — Exam certificate. Certificate
